

Fixed APN Services

Managed Mobile Data

- By using Fixed APN services your mobile data cost will be reduced
- Fixed LTE allow for predictable data rates and usage
- Easy to use, powerful, single portal
- API integration that enables full integration into your existing systems

Private Networks, Static IP, Connected SIMs

Every SIM is assigned a private static IP address on the core connected network, giving you access to your M2M and IoT devices within your own private and secure network. This is proven to be the most secure methods of accessing your connected device end points.

- Increased network speed
- Lower latency packet delivery
- Quality of service enrichment
- Full control of data threads
- 0% IPsec VPN overhead

T&C Apply

Scalability

- Mobile Connectivity as a Failover
- Branch Deployments, National connectivity, fast deployments
- Temporary connectivity
- Mobile Workforce
- Work Remotely
- Disaster recovery

Features includes

■ Built-in Security

- ✓ Device IMEI tracking
- ✓ Lock a Device
- ✓ SIM Alerts when inserted into new device
- ✓ Lock a specific SIM to a single device's IMEI (International Mobile Equipment Identity). If a locked SIM attempts to connect to your network via a new device without authorisation, the connection will not be established until the SIM is re-authorised to do so.
